

Gary Albert  
Manager, Enterprise Data Center Operations  
Air Traffic Organization  
Federal Aviation Administration

Gary Albert is the Manager of Enterprise Data Center Operations for the Air Traffic Organization at the Federal Aviation Administration. He is responsible for providing a secure, highly available and scalable hosting environment for systems from the FAA, Department of Transportation and other government agencies. This environment includes a Virtual server infrastructure, a virtualized multi-tiered enterprise SAN, Windows/UNIX/Linux server infrastructure, highly available Oracle and MS SQLServer infrastructure and Backup/Recovery services. The Enterprise Operations involves two geographically diverse data centers that provide disaster recovery replication and failover services for each other. Gary has worked on significant IT consolidation efforts at the FAA for the past seven years. Prior to that, he managed IT Operations Services for Pepco Holdings Inc, one of the largest energy delivery companies in the Mid-Atlantic region.
